

# ONE TOUCH FITTINGS

# PRE-TEFLONED TAPER THREAD

With pleasure we introduce on the market of the Pneumatic for Industrial Automation the range of one touch fittings and one touch flow regulators

## FITTINGS

Tube coupling with a simple pressure of the same, up to the bottom of the fitting.

Tube uncoupling through pressure on the external plastic ring and successive traction of the tube (without tools).

NBR V-seal has an optimal dimensional interference with the tube and guarantees an optimal resistance also with vacuum and water. Thanks to its profile, it maintains optimal resistance also in presence of emphasized tube curves in proximity of the fitting.

The threads are pre-tefloned taper and guarantee a perfect resistance without any other operation.

We can supply also **gas parallel fittings with sealing O-RING**.

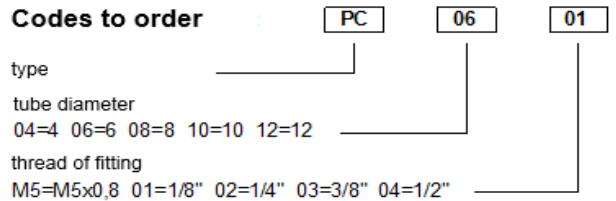

For some figures there are also one-touch fittings for **tube diameter 16** (external).

Please contact our technical office for more details.

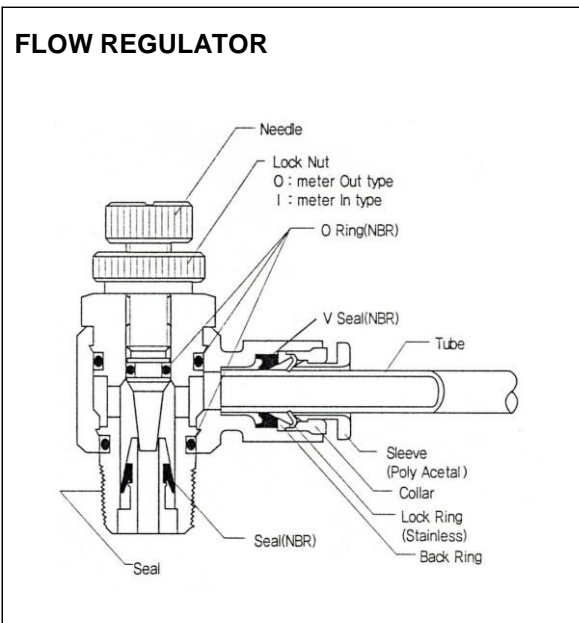

## Technical data

<b>Fluid</b>	compressed air, water, vacuum
<b>Working pressure</b>	0 ÷ 9,9 bar
<b>Max pressure</b>	- 750 mm Hg
<b>Working temperature</b>	from 0° to + 60° C
<b>Material</b>	OT 58 + technopolymer
<b>Seals</b>	NBR
<b>Tubes</b>	polyamide PA11 and PA12 - polyurethane - nylon

## Codes to order

## FLOW REGULATOR

Coupling and uncoupling of the tube work as described for the fittings and with the same facility. The threads are pre-tefloned taper and guarantee a perfect resistance without any other operation. The screw of regulation of the flow is easily manoeuvrable and thanks to "coarse pitch" of the thread, allows a good sensibility of the regulation.

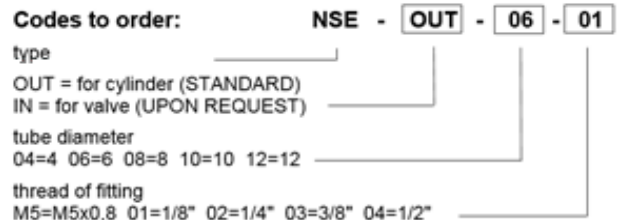

The counter nut assures the block of the regulation screw, assuring the stability of the set up flow. flow regulators are unidirectional type with free passage in the other sense.

There are two types:

**OUT** (standard) : for assembly on cylinder

**IN** : for assembly on valve

## Codes to order:
